1. Step

Stand with your left foot in socks on the gray surface so that your heel touches the bottom line.

2. Step

Hold a pencil vertically with the tip pointing down at the longest part of your foot and mark this spot on the gray template. With the help of the white markings you can easily read your shoe size.

If your mark is between two lines, please take the next shoe size up.

Hint:

Since feet are not completely identical, it is recommended to measure both feet and choose the larger value.

IMPORTANT:

A tolerance of up to 0.5 cm should be added to the measured value, especially for thick-lined shoes.

Please print these instructions in original size - no scaling - otherwise the size markings will not be correct. For control you can put a 1€ piece on the marking.
